

James Jackson

Kraken is the new end-to-end operating system for utilities

Customer Management

CIS & Billing
Meter Data Management
Customer Relationship Management (CRM)
Customer Interaction

Field

Job & Workforce Management
Material Management
In-field App
Customer Service & After Care

End-to-end system
Cloud-native
Continuous integration
Data intelligence
Self-served differentiation

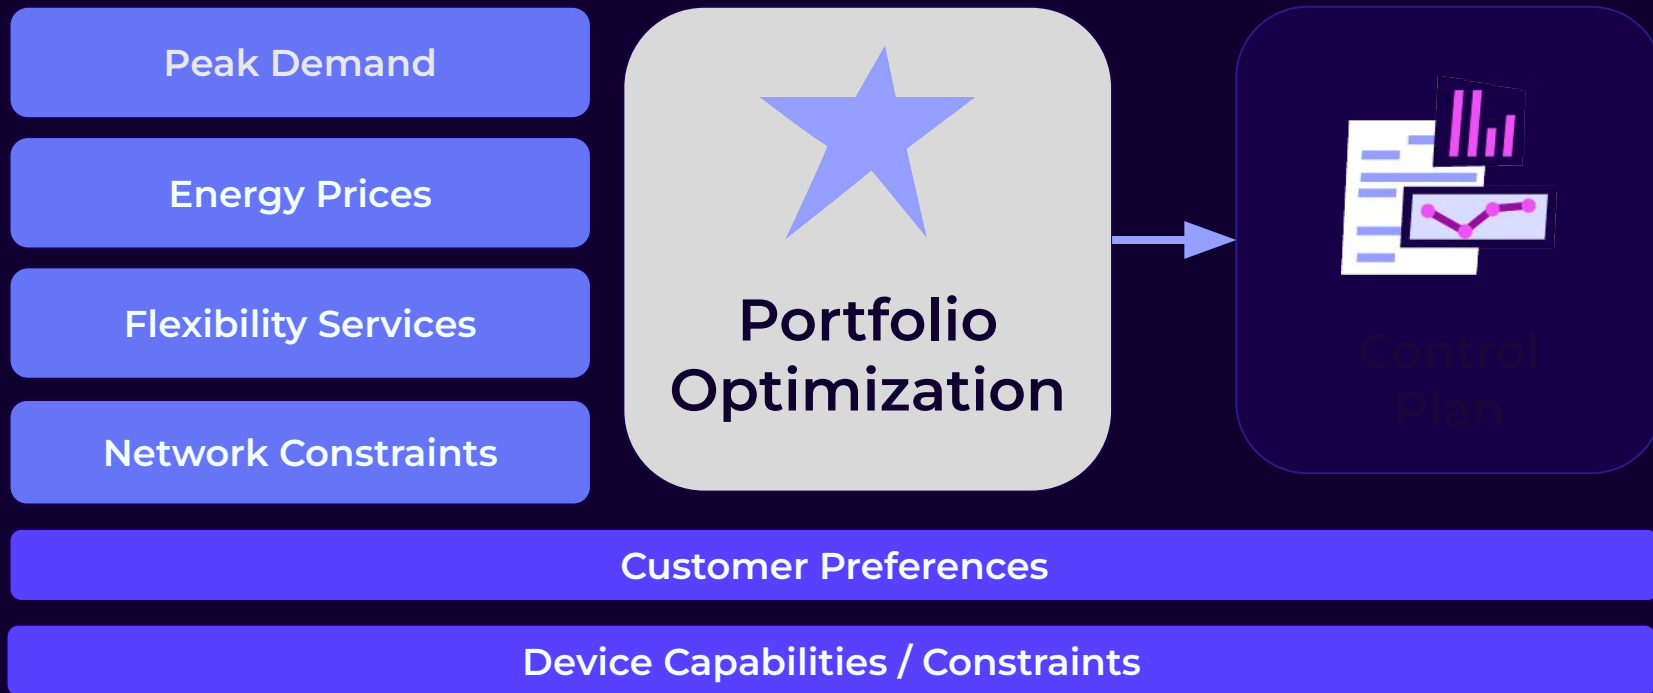

Generation Flex

Utility scale asset control and optimization

Customer Flex

Consumer engagement, device control and optimization

Kraken Flex | Optimization

Fully integrated system

A fully integrated system reduces the total cost of ownership, number of systems to interface with and improves efficiency.

The combination of access to additional value across large scale BESS, solar and gas, C&I and retail offers a platform to optimize, aggregate and disaggregate assets from generation through to supply.

This includes a growing list of pre-configured integrations with the following asset types:

Wind Turbines

Solar (PV)

Battery Storage

Commercial Generators

Refrigeration & Cooling

Industrial Pumps

Heat Pumps

Air Conditioning

Industrial Fans

Electric Vehicles

Combined Heat & Power (CHP)

Boilers

Gas Peakers

Production Lines

Home Energy Management System

Building Management System (BMS)
